

NORIS CLASSIC IMPLANT SYSTEM

Stability and accuracy above all

IMPLANTS

The Noris Classic series delivers a comprehensive solution for both everyday and advanced cases, combining clinical versatility with surgical simplicity.

Two Prosthetic Platforms - One Efficient Protocol

Internal Hex Platform - featuring 5 distinct implant designs tailored to various clinical scenarios (soft bone, hard bone, narrow ridges, immediate placement, etc.)

Conical Platform - a single implant design offering strong mechanical stability and tight biological seal.

In both platforms, all implant lengths and diameters are built on a single prosthetic platform. This allows for:

- Simplified restorations
- One universal surgical kit
- Streamlined workflow that saves time and reduces complexity for the clinician

Implant range:

From 6 to 25 mm, depending on diameter - adaptable to a wide range of anatomical situations.

One system. One platform. Endless possibilities.

PROSTHETICS

Noris offers a full prosthetic solution for both temporary and final restorations.

Our system supports:

- Traditional analog techniques (closed/open tray)
- Digital workflows (full intraoral and lab scanning compatibility)
- Multi-unit systems for straight and angled abutments (17°, 30°, 45°, 52°, 60°)
- Solutions for single-unit, bridge, or full-arch restorations
- A wide selection of heights and gingival profiles

From immediate loading to long-term esthetics – all under one platform.

DIGITAL WORKFLOW - EZGuide™ System

Gain confidence in your implant placement with our advanced guided surgery system.

The EZGuide™ offers:

- Efficient planning from single implants to complex pterygoid cases
- High accuracy with tooth-supported or tissue-supported, surgical guides
- Compatibility with a wide range of dental software libraries (Exocad, 3Shape, etc.)
- Custom sleeve ordering for each case

Simply make it “Easier” on yourself.

Versatility
for **EVERY CASE**
